

# Try it out!

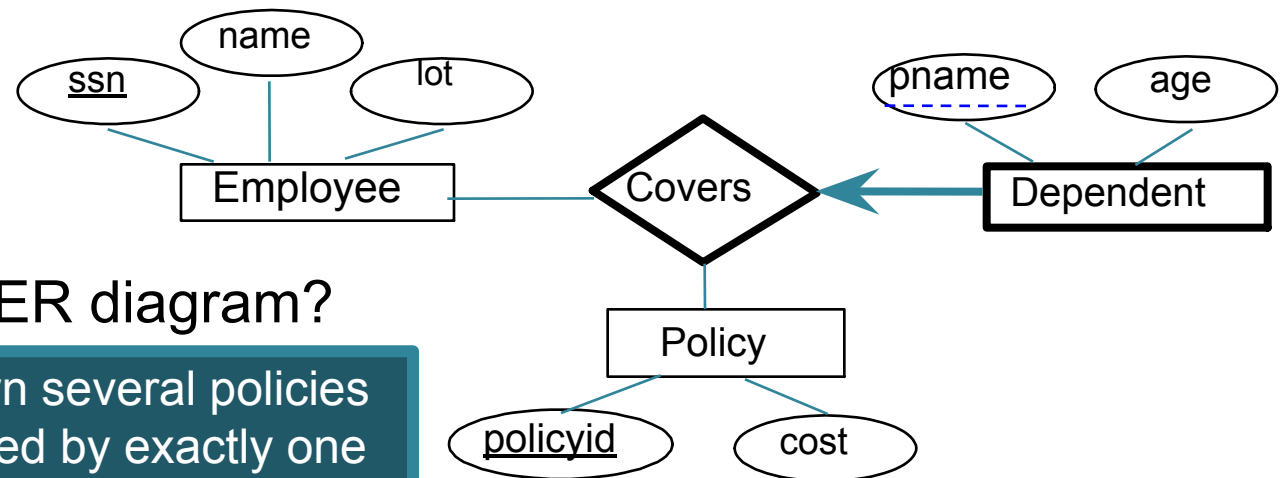

1. An insurance policy cannot be owned by multiple employees
2. Every policy must be owned by an employee
3. Dependents is a weak entity set, identified by the conjunction of pname with policyid.

# Incorrect Design Example

1. An insurance policy cannot be owned by multiple employees
2. Every policy must be owned by an employee
3. Dependents is a weak entity set, identified by the conjunction of pname with policyid.

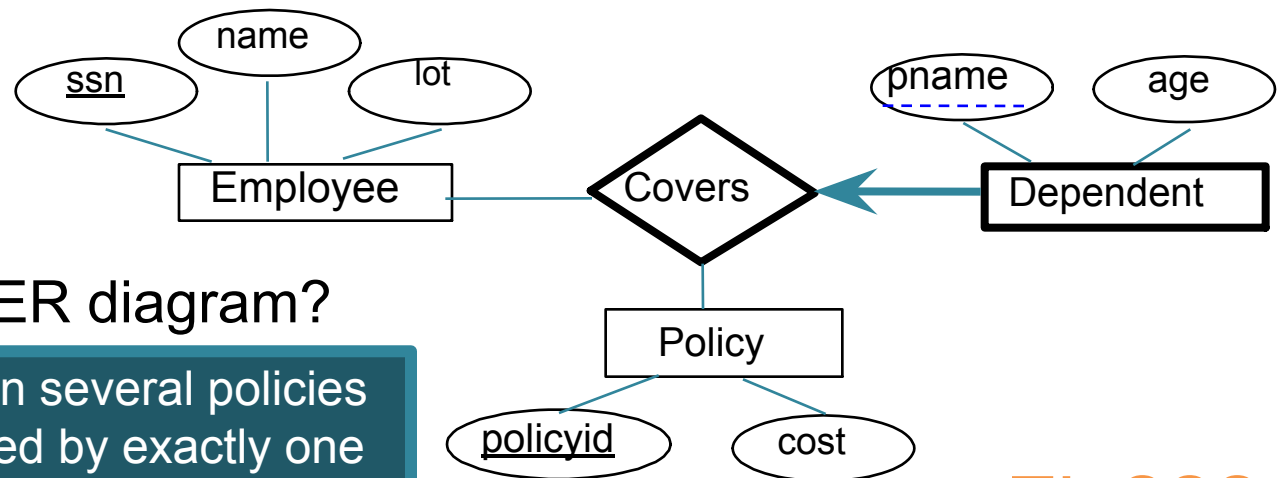

What is true in this ER diagram?

- A) Employees can own several policies
- B) Each policy is owned by exactly one employee
- C) Each dependent can be covered by several policies

# Incorrect Design Example

1. An insurance policy cannot be owned by multiple employees
2. Every policy must be owned by an employee
3. Dependents is a weak entity set, identified by the conjunction of pname with policyid.

What is true in this ER diagram?

- A) Employees can own several policies
- B) Each policy is owned by exactly one employee
- C) Each dependent can be covered by several policies

Fix???

# Better Design

1. An insurance policy cannot be owned by multiple employees
2. Every policy must be owned by an employee
3. Dependents is a weak entity set, identified by the conjunction of pname with policyid.
